

ABSTRACT

A system and method for object based delivery of on-line courses and content. The system and method can be used, for example, to develop instructional and educational content. Information stored on the system may be searched and reused in developing a new course. Alternatively, new content may be created using the system. The system and method includes administrative functions to monitor the development of content and the efficient use of the system.

A system and method for object based delivery of on-

line courses and content. The system and method can be used,

for example, to develop instructional and educational content.

Information stored on the system may be searched and reused in

developing a new course. Alternatively, new content may be

created using the system. The system and method includes

administrative functions to monitor the development of content

and the efficient use of the system.
